

WHAT TO KEEP IN MIND ON INJECTION DAY

Whether you've self-injected before, or new to it, here's a quick-tip guide that can help.

Before you inject for the first time, talk with your doctor, and be sure you've been shown the proper injection technique with SKYRIZI.

BEFORE INJECTING:

Leave the carton at room temperature and out of direct sunlight for 30 to 90 mins before injecting

Place the following on a clean, flat surface

- ✓ 1 SKYRIZI Pen (included)
- ✓ 1 alcohol swab
- ✓ 1 cotton ball or gauze pad
- ✓ FDA-cleared sharps disposal container

Wash and dry your hands

1 PICK INJECTION SITE

Pick a place on either thigh or stomach. If you choose your stomach, ensure you inject at least 2 inches away from your belly button. Grab a store-bought alcohol swab and clean your skin in a circular motion.

2 PULL OFF THE CAP, THROW IT AWAY

Check the liquid through the inspection window. It should look clear to slightly yellow and may contain white or clear particles. It's also normal to see bubbles.

3 PLACE ON THE INJECTION SITE

Once you've found the right spot, turn the SKYRIZI Pen so the white needle sleeve points towards the injection site. Pinch the injection site skin gently then hold it at a 90-degree angle.

4 PRESS THE BUTTON DOWN

Press down and wait for the "click" sound before removing the SKYRIZI Pen.

AFTER INJECTING:

Dispose of the SKYRIZI Pen in a leak-resistant sharps disposable container.

And don't forget to log your injection on the Skyrizi Complete App and add a reminder for your next dose in 12 weeks.

Safety Considerations¹

SKYRIZI may cause serious side effects, including risk of infections. Before starting treatment, your doctor should check you for infections and tuberculosis. Tell your doctor right away if you have an infection or symptoms of one. Also, tell your doctor if you plan to or recently received a vaccine.

USE AND IMPORTANT SAFETY INFORMATION ABOUT SKYRIZI[®] (risankizumab-rzaa)¹

SKYRIZI Use¹

SKYRIZI is a prescription medicine used to treat adults with moderate to severe plaque psoriasis who may benefit from taking injections or pills (systemic therapy) or treatment using ultraviolet or UV light (phototherapy).

Important Safety Information¹

What is the most important information I should know about SKYRIZI[®] (risankizumab-rzaa)?

SKYRIZI may cause serious side effects, including infections. SKYRIZI is a prescription medicine that may lower the ability of your immune system to fight infections and may increase your risk of infections. Your healthcare provider should check you for infections and tuberculosis (TB) before starting treatment with SKYRIZI and may treat you for TB before you begin treatment with SKYRIZI if you have a history of TB or have active TB. Your healthcare provider should watch you closely for signs and symptoms of TB during and after treatment with SKYRIZI.

- Tell your healthcare provider right away if you have an infection or have symptoms of an infection, including:
 - fever, sweats, or chills
 - muscle aches
 - weight loss
 - cough
 - warm, red, or painful skin or sores on your body different from your psoriasis
 - diarrhea or stomach pain
 - shortness of breath
 - blood in your mucus (phlegm)
 - burning when you urinate or urinating more often than normal

Before using SKYRIZI, tell your healthcare provider about all of your medical conditions, including if you:

- have any of the conditions or symptoms listed in the section “What is the most important information I should know about SKYRIZI?”
- have an infection that does not go away or that keeps coming back.
- have TB or have been in close contact with someone with TB.
- have recently received or are scheduled to receive an immunization (vaccine). Medications that interact with the immune system may increase your risk of getting an infection after receiving live vaccines. You should avoid receiving live vaccines right before, during, or right after treatment with SKYRIZI. Tell your healthcare provider that you are taking SKYRIZI before receiving a vaccine.
- are pregnant or plan to become pregnant. It is not known if SKYRIZI can harm your unborn baby.
- are breastfeeding or plan to breastfeed. It is not known if SKYRIZI passes into your breast milk.

Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements.

What are the possible side effects of SKYRIZI?

SKYRIZI may cause serious side effects. See “What is the most important information I should know about SKYRIZI?” The most common side effects of SKYRIZI include upper respiratory infections, feeling tired, fungal skin infections, headache, and injection site reactions.

These are not all the possible side effects of SKYRIZI. Call your doctor for medical advice about side effects.

Use SKYRIZI exactly as your healthcare provider tells you to use it.

SKYRIZI is available in a 150 mg/mL prefilled syringe and pen.

You are encouraged to report negative side effects of prescription drugs to the FDA. Visit www.fda.gov/medwatch, or call 1-800-FDA-1088.

If you are having difficulty paying for your medicine, AbbVie may be able to help. Visit AbbVie.com/myAbbVieAssist to learn more.
